```
[ec2-user@ip-172-31-39-51 lab2]$ terraform workspace new dev

  Warning: Deprecated Parameter

  The parameter "dynamodb_table" is deprecated. Use parameter "use_lockfile" instead.

Created and switched to workspace "dev"!

You're now on a new, empty workspace. Workspaces isolate their state,
so if you run "terraform plan" Terraform will not see any existing state
for this configuration.
[ec2-user@ip-172-31-39-51 lab2]$ terraform workspace new prod

  Warning: Deprecated Parameter

  The parameter "dynamodb_table" is deprecated. Use parameter "use_lockfile" instead.

Created and switched to workspace "prod"!

You're now on a new, empty workspace. Workspaces isolate their state,
so if you run "terraform plan" Terraform will not see any existing state
for this configuration.
```

```
[ec2-user@ip-172-31-39-51 lab2]$ terraform apply -var-file=prod.tfvars

  Warning: Deprecated Parameter

  The parameter "dynamodb_table" is deprecated. Use parameter "use_lockfile" instead.

module.network.aws_vpc.this: Refreshing state... [id=vpc-03c0712c5f17cc5f8]

module.compute.aws_security_group.app_sg: Refreshing state... [id=sg-085a7a53b5d871674]

Terraform used the selected providers to generate the following execution plan. Resource actions are indicated with the following symbols:
  + create

Terraform will perform the following actions:

  # module.compute.aws_instance.app will be created
  + resource "aws_instance" "app" {
      + ami                                  = "ami-08bdb1495db49a7f9"
      + arn                                  = (known after apply)
      + associate_public_ip_address          = (known after apply)
      + availability_zone                    = (known after apply)
      + disable_api_stop                     = (known after apply)
```

```
Plan: 2 to add, 0 to change, 0 to destroy.

Do you want to perform these actions in workspace "prod"?
  Terraform will perform the actions described above.
  Only 'yes' will be accepted to approve.

  Enter a value: yes
